

I am a commercial vehicle operator traveling 48 states and Canada. I recieved XM Satellite radio as a gift this past Holiday and quickly became dependant on the service XM provides me daily. And with the recent addition of 24 hour traffic and weather to its program, XM has become a very vital tool for me. For example, with the 24 hour weather and traffic they now provide for me, I can plan my trips according to any possible traffic or weather problem area in that city. I cannot do this with a local FM channel I cannot reach until I'm almost within the City limits. Proper planning of my schedule for me is important. Keep Satellite Radio in operation, please
